

**Employment Skills Centre,
Strode College, Street**

Initial works comprised the demolition of existing buildings and the subsequent construction of an 'Employment Skills Centre' at Strode College.

The three storey building was constructed in a tight corner of the college, closely surrounded by other buildings and the college boundary fence.

The building sits on piles and ground beams with a cast in-situ ground floor. There is radon protection incorporated within the structure.

A steel frame provides the support for walls, floors and roofs, the first and second floors are of cast in-situ concrete on steel profiled decking and the roof is of standing seam construction.

The building is clad in a mixture of brick, spandrel panels, curtain walling and timber.

Value: £1.4m
