

Community and Children's Centre, Stowford Rise, Sidmouth

The construction of a single storey timber frame building to form a Community Centre and Children's Centre in two units with a central connecting entrance. Built on a steeply sloping site, the project required significant earth works to be undertaken initially to create a level area.

Sustainability was a central requirement for the client which resulted in several environmentally friendly features. With high levels of natural daylight, ventilation and insulation, the building has low running costs.

External works included car parking, paving and landscaping. Constructed alongside residential properties careful planning was required to minimise disruption to residents during the construction phase.
