

**Bath Buildings Surgery,  
Bristol**

This particular project for Montpellier Health Centre comprised the initial demolition of an existing weighbridge and subsequent construction of a new two storey building.

The new Surgery, situated in an adjacent position to the existing Montpelier Health Centre, consists of a range of services including six consulting rooms, a treatment room, pharmacy and staff facilities.

Traditionally constructed, the external appearance of the building features a mix of brickwork and render with a tiled pitched roof.

The building was constructed within a cul-de-sac accessed via narrow residential roads. With limited storage and parking facilities, combined with adjacent buildings, careful planning was required to manage the logistics necessary to maintain the programme.

**Value: £0.7m**
